Manhattan Plaza HD-S2 v1.26 Release Notes - 07/06/2016

Please note that due to the changes in this release, the receiver will automatically reset to factory default and all user settings such as below will be lost:

- Favourites
- Reminders
- Deleted channels
- Settings

After reset, the installation process will start. Please follow the on-screen prompts and if you need assistance refer to the "Tuning In" section on page 12 of the User Guide.
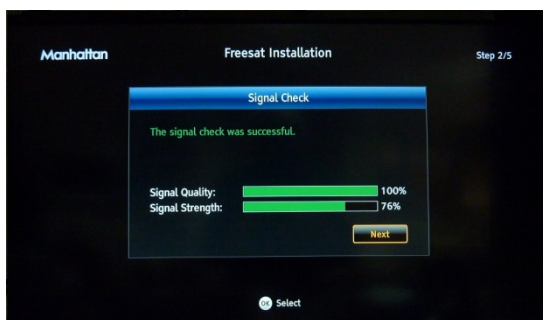

Change Log

v1.26 (from v1.23)

- Improved the ability of the HD-S2 to scan for the Freesat Home Transponder in case its location changes in the future. Please see the below notes.

Notes on the updated Signal Check

1. During the 'Signal Check' step the receiver scans for Freesat's Home Transponder and displays **'Scanning for Freesat; please wait…'** This can take up to 2 minutes to complete.

2. After successfully finding the Home Transponder and verifying the connected signal the message **'The signal check was successful'** is displayed and the **'Next'** button is highlighted.

Press **'OK'** on the remote control to proceed to the next step.
